#### ABSTRACT

This report describes the Comprehensive Local School approach to school restructuring, which envisions the school as the coordinating vehicle for all children's services, including health and social services, and which reconfigures and coordinates all categorical programs at the school site under a site-based management system characterized by a participatory decision-making process. The report presents a reprint of an article from the journal, "Remedial and Special Education" by Wayne Sailor, titled "Special Education in the Restructured School." The article identifies trends in special education reform, including the movement to integrate students with severe disabilities into general educational schools and classrooms and the effort to retain students with mild and moderate disabilities in the general classroom. The article then proposes that reform efforts in general education present an opportunity for amalgamation of related viewpoints through broad-based, school restructuring policy reform. This amalgamation is reflected in regulatory waivers, site-based management and budgetary control, shared decision making, and full infusion of federal categorical program resources into the general education program. A list of 12 organizations that support innovative restructuring efforts by schools is presented, and a list of the schools that these organizations support or work with in restructuring and reforming educational programs is also provided. In addition, a list is presented of 21 schools that indicated in a survey that they were implementing general and special education reform. (JDD)

### Restructuring Education In the 90s

The California Research Institute (CRI), federally funded at San Francisco State University since 1982, has a total of ten years of research experience with states and school districts throughout the United States involved in innovative, systematic reform efforts to enhance the education for students with disabilities.

Based on this research and experience, in 1985 CRI began the development of an approach to school restructuring which was widely disseminated in 1989 with the publication of the text, Comprehensive Local School: Regular Education for All Students with Disabilities (Sailor, Anderson, Halvorsen, Doering, Filler, & Goetz, 1989). This model, which began with efforts to integrate students with severe disabilities into the life of the regular school, has expanded over the past three years to a model of school restructuring that is strongly geared to coordinated management of categorical resources to the collective advantage of all students at the school site; hence, the term "comprehensive" local school.

The integration institute at CRI, which has now concluded its five years of federal funding, conducted a large-scale research program in support of various components of the restructuring model. The published research base up to 1988 was reviewed in Halvorsen and Sailor (1990) and in Sailor et al. (1989).

The CLS model in its present form is a blend of the categorical program-driven model published in Sailor et al. (1989) and the California Department of Education Reform Initiative (California Department of Education, 1990; Winget, 1990). The model is generic in the sense that it can be adapted wholly, or in part, to fit restructuring goals and objectives of any school, public or private. It is specifically designed to operate on existing school district resources, so that new sources of revenue are not required for either initial start-up or long-range implementation. The CLS model has five distinct components, each of which is geared to a specific age group in the educational

continuum. School organization and restructuring is thus examined in terms of issues affecting (1) early childhood programs; (2) elementary programs; (3) middle school, or junior high school programs; (4) secondary programs; and (5) post compulsory educational programs.

Comprehensive Local School as an approach to school restructuring has two principal features that distinguish it from many other models: (1) CLS envisions the school as the coordinating vehicle for all children's services, going beyond traditional educational issues to encompass health and social service issues as well. Schools under this model gradually progress toward comprehensive, interdisciplinary children's service centers, with education comprising the primary service around which other services are configured according to need; and (2) CLS functions as a comprehensive, unified educational vehicle with all categorical programs reconfigured and coordinated at the school site under a strong site-based management system characterized by a participatory decision-making process.

Other key variables related to the CLS restructured school at each level of schooling are described in detail Sailor's 1991 article, Special Education in the Restructured School, located in Section One of this document.

In response to a request by states involved in systems change to support the integration of students with severe disabilities, CRI has developed the following list of restructuring organizations located across the country. These organizations support innovative restructuring efforts by schools.

Our objective in sharing this information is to encourage collaboration and the building of bridges between restructuring/reform initiatives in special education and general education systems. We wish to support the efforts of educators to join forces with one another to ensure that all students can succeed in schools that will embrace the diversity they bring in ethnic origin, color, socio-economic level, language, or ability.

The organizations listed in Section Two have provided CRI with a list of schools they support or work with in restructuring and reforming educational programs. The list provided in Section Three is a compilation of all the school lists provided to us by the organizations. This list is organized by state, not by organizational affiliation.

In addition, a list of twenty-one schools can be found in Section Four which includes those schools that responded to a CRI survey focused on collaboration between general and special education. These schools indicated that they were implementing reform that included both general and special education.

Since this task has been underway since early 1992, it is possible that some of the names and phone numbers have changed. We regret any inaccuracy in this information.

It is important to note that CRI has not had the opportunity to visit these school sites and/or validate their restructuring efforts. We present this list based on the sites' indicating that they wished to be included on our list.

"Special Education in the Restructured School"

(Sailor, 1991)

## Special Issue Article

## Special Education in the Restructured School

Wayne Sailor

Two significant, overriding trends in reform have emerged in special education at all levels from policy to program implementation during the past decade. These are, first, the movement to integrate students with severe disabilities and those with low-incidence disabilities into general education schools and classrooms for their educational programs; second, the effort to retain students with mild and moderate disabilities in the general classroom as an alternative to pull-out programs. These trends are closely associated. Until recently, parallel trends in general education reform bave tended to focus on improvement in curriculum and in instructional techniques. Most recently, bowever, these reform efforts have shifted in the direction of systematic reorganization of school governance structures, policy, and resource utilization at the school site. This shift presents an opportunity for amalgamation of these various related viewpoints through broad-based, school restructuring policy reform. This amalgamation is particularly reflected in those aspects of restructuring that are concerned with regulatory waivers, site based management and budgetary control, shared decision making, and full infusion, with school site coordination, of federal, categorical program resources into the general education program. Sufficient parallels exist between the general and special education reform agendas to suggest that the time may be at hand for a shared educational agenda.

S IGNIFICANT REFORM EFFORTS have characterized special education over the past decade. Parallel efforts at reform have also been under way over the same period in general education. Until recently, these separate reform directions have held relatively little significance for one another and, if anything, have tended to increase the separation between the two groups of educators. Very recently, however, the dominant trend of reform in general education has shifted attention to organization and governance issues in an effort to better support the needs of a changing demography, characterized by greater diversity among the nation's collective student body.

Within special education, dominant reform trends have been focused in part on achieving greater social and, to a degree, academic integration of students with wide-ranging types of significant disabilities in general education schools and classrooms. For example, emphasis is frequently placed on partial participation

in the general classroom curriculum, assisted by curricular and technological adaptations (e.g., Thousand & Villa, 1989), for students with even the most severe disabilities. A larger and more controversial agenda has been focused on efforts to retain students with milder disabilities, such as learning disabilities, in general education classrooms and to reduce the incidence of utilization of pull-out strategies, such as self-contained classes and resource room configurations for these students.

In general education, reform efforts have shifted recently, from intensive concentration on efforts to improve curriculum and instruction, to efforts in the reorganization of school and district-level governance systems and in the manner in which fiscal and personnel resources are allocated and utilized at the school site. This shift in emphasis in general education reform presents a window of opportunity for the emergence of a shared educational agenda, one that holds poten-

8 Remedial and Special Education

Volume 12 Issue 6 November/December 1991 (pp. 8-22)

tial for capturing the innovative elements of improvement and reform in federal categorical programs such as special education as well as elements in general education reform. In the remainder of this paper, the basis for a shared educational agenda in school reform is examined by considering dominant aspects of special education reform in light of the current school restructuring movement.

Trends in Special Education Reform

The movement of students with significant and multiple disabilities ("severely handicapped") into general educational settings has undeniably represented the hallmark of research and development activity concerned with this population over the past decade. Much of the summative literature base of the 1970s was concerned with how and what to teach, focusing on behavioral teaching technology with its emphasis on task analysis and data management schemes (Haring & Bricker, 1978; Haring & Brown, 1976, 1977; Sontag, 19"; York & Edgar, 1979). In the 1980s the focus shifted palpably to a concern with where to teach and the ramifications of the learning environment. This past decade also witnessed the least restrictive environment (LRE) language in statutory and regulatory language begin to take on a major significance from policy-level decisions to classroom practice (Sailor, Wilcox, & Brown, 1980; Snell, 1978).

The emphasis on social and, to a lesser degree, academic integration of the population with more severe disabilities has been strongly buttressed by positive outcomes in comparative "efficacy" studies (Brinker & Thorpe, 1984; Halvorsen & Sailor, 1990; Meyer, Peck, & Brown, 1990; Sailor et al., 1989), and by legalpolicy analytic interpretations of the litigative history of P.L. 94-142 (Gilhool, 1989; Gilhool & Stutman, 1978). The integration thrust has met only token resistance in the research literature (Burton & Hirschoren, 1979; Cruickshank, 1977; Gottlieb, 1981; Haywood, 1981), but no controlled studies have surfaced to date presenting data supportive of separate rather than integrated educational programs (see Halvorsen & Sailor, 1990, for a review of efficacy studies on integration).

### Students with Severe Disabilities

Studies of specific issues in the placement of students with severe disabilities are few in number and inconclusive, but seem to suggest increased placements in more integrated educational environments over time (Haring et al., in press) characterized by a great deal of variability across the states (Danielson & Bellamy, 1989). The emphasis on integrated educational placements appears to extend to students with the most severe disabilities, including those with significant

health or behavioral problems (Campbell & Bailey, in press; Sailor, Gee, Graham, & Goetz, 1988), and to encompass a "zero-rejection" philosophy, wherein no student or disability category would be deemed too disabled to be integrated (Sailor, Gerry, & Wilson, in press-b).

"In general education, reform efforts have shifted recently, from intensive concentration on efforts to improve curriculum and instruction, to efforts in the reorganization of school and district-level governance systems and in the manner in which fiscal and personnel resources are allocated and utilized at the school site."

Most recently, the emphasis in the literature pertaining to integration of students with severe disabilities has shifted from a discussion of approaches that exemplify special class models within regular schools, where integration occurs primarily in extraneous school settings such as assemblies, recess, and lunch time involving peer tutors, friendship relationships, etc., to a discussion of "full inclusion" models that exemplify placement of these children in the general classroom with some program time in other environments, as needed (Biklen, Bogdan, Ferguson, Searl, & Taylor, 1985; Falvey, 1989; Forest & Lusthaus, 1989; Sailor et al., 1989; Stainback & Stainback, 1990; Stainback, Stainback, & Forest, 1989; Thousand & Villa, 1989). The pros and cons of these relative placement considerations are discussed in Brown et al. (1989a. 1989b) and in Sailor et al. (in press-b).

The full inclusion approach to the provision of integrated special educational services to low-incidence and severe disability populations appears to be gaining strength across the country. A recent study by the California Research Institute (CRI) resulted in the identification of some 15 school districts around the country that are reported by their administrative staff as entirely, or close to being entirely, operated on a full inclusion basis (Karasoff & Kelly, 1989), with the most extensively documented service delivery model to emerge to date being provided by the Johnson City School District in upstate New York (Mamary & Rowe. 1990). Three entire states have now published their intent to commit to some form of a full inclusion delivery system within a short time span: Colorado (McNulty, 1990); Iowa (Hamre-Nietupski, Nietupski. & Maurer, 1990); and Vermont (Williams et al., 1986). Other states, including California, with the impetus provided by their successful competition in the federal Office of Special Education and Rehabilitation Services (OSERS) systems change grants program to enhance

Remedial and Special Education

less restrictive educational placements (e.g., Winget, 1990), are developing positions of policy and program implementation philosophy that suggest strong trends toward statewide full inclusion practices. Several Canadian models have also emerged, most notably in Ontario and New Brunswick (Forest, 1987; Stainback et al., 1989; Vandercook, York, & Forest, 1989). Finally, within western European countries, Italy stands out as the country with the most visible application of full inclusion educational services, particularly in the northern provinces of Liguria (i.e., Genoa) and Emilia-Romagna (i.e., Bologna) (Gaylord-Ross, 1987; Sailor, 1989; Vitello, 1989).

The basic components that most full inclusion models share include:

- 1. All students attend the school to which they would go if they had no disability.
- 2. A natural proportion (i.e., representative of the school district at large) of students with disabilities occurs at any school site.
- A zero-rejection philosophy exists so that typically
  no student would be excluded on the basis of type
  or extent of disability [except, see Sailor, Gerry, &
  Wilson (in press-a) for a discussion of the implications of these models for children with deafness].
- School and general education placements are ageand grade-appropriate, with no self-contained special education classes operative at the school site.
- 5. Cooperative learning and peer instructional methods receive significant use in general instructional practice at the school site.
- Special education supports are provided within the context of the general education class and in other integrated environments.

Obviously, a school organization that includes these six points can only exist in the context of a unified educational program wherein planning for the education of general as well as special populations at the school site is a shared responsibility of the total professional and administrative staff (Stainback et al., 1989; Stainback & Stainback, 1990), and, conversely, where special education does not function as a "second system" (Gartner & Lipsky, 1990b) with descriptors such as "a school within a school," "side-by-side program," and so on.

### Students with Mild or Moderate Disabilities

Although the integration imperative has met with relatively little resistance from the educational research community, efforts to reform service delivery to the population of students with milder disabilities, to the contrary, have generated enormous controversy. These efforts surfaced visibly in 1986 as a federal policy initiative (Will, 1986), called the Regular Education

Initiative, or REI, which seemed to suggest that responsibility for the education of these children should best be viewed as a shared responsibility of all educators rather than the sole purview of special education. The initiative quickly gained support from several prominent educational researchers whose data collectively suggested that under certain service delivery models. children with learning disabilities, for example, would do better in mainstreamed educational programs than in pull-out, resource-room, separate classroomoriented programs (Wang & Peverly, 1987; Wang, Reynolds, & Walberg, 1986, 1988). These publications resulted in an unprecedented entire issue of the Journal of Learning Disabilities (January 1988) being devoted to a rebuttal of the Wang and Reynolds research and program development efforts.

Later on, others argued that the REI was "deeply flawed" social policy in that it was a special education initiative rather than a regular education initiative (Singer, 1988; Singer & Butler, 1987), that REI was inappropriate for certain categorical disability groups (Braaten, Kauffman, Braaten, Polsgrove, & Nelson, 1988), and that the REI constituted nothing less than a Republican plot to destroy special education and redirect the funds from P.L. 94-142 to a more socially affluent and high-achieving class of children and youth (Kauffman, 1989). [See also Goetz & Sailor (1990), Kauffman & Hallahan (1990), and McLeskey, Skiba, & Wilcox (1990), for discussions of this article.]

The issue on the special education side is clearly one that evokes strong emotion, even among otherwise sanguine academic researchers. Kauffman (1989). Singer (1988), Vergason and Anderegg (in press), and others have written in highly charged rhetorical terms on the topic, with reference to "throwing the baby out with the bathwater," for example. Opponents of REI have argued that its proponents believe:

- 1. No truly special instruction is needed by any student.
- 2. Special training is not required for handicapped students or for their teachers.
- 3. Specific targeting of funds for specific students is unnecessary.
- 4. All students can be instructed and managed effectively in general classrooms.
- The more important equity issue is the site, not the quality of instruction. (Goetz & Sailor, 1990, p. 336)

McClesky et al. (1990) argued that extensive reviews of the literature that examine categorical labeling and grouping in terms of special education effectiveness collectively have revealed a set of conclusions that are at variance with the conclusions of the most vociferous reform opponents, particularly Kauffman (1989).

Goetz and Sailor (1990) argued that the "most radical" suggestions that can be gleaned from the sum total

of the reform literature are: (a) Special education may work best in mainstream educational settings; (b) categorical labels and homogeneous special education grouping strategies are nonprescriptive in themselves; and (c) special education may function most effectively as a support to the regular educational program rather than as a second system operating in parallel to regular education, but without sufficient contact and coordination with it. Opponents of special education reform who are focused on students with mild and moderate disabilities tend to view these efforts as an attack on and direct threat to special education, rather than as an attempt to introduce reform into special education that would align its mission more closely with that of the greater body of general education.

### Special Education Reform as a Cohesive Trend

In one sense REI is to children with moderate and mild disabilities as the integration imperative (Gilhool. 1989) is to children with low-incidence and severe disabilities. The common denominator is the principle of the least restrictive educational environment, which in turn is born of the recognition that social and communicative development in children with disabilities is predicated on opportunities for mainstream socialization as well as academic experiences, and thas these experiences are an inherent entitlement of children with disabilities under the constitutional guarantee of freedom of association (Council of Chief State School Officers, 1989; Fine, 1983, 1987; Sailor, Gerry, & Wilson, in press-a). Current reform efforts in special education at both the policy and programmatic levels are aimed, as they are in the case of general educators, at redesigning existing statutory and regulatory systems to meet the needs of a changing demography of constituents and to better reflect major technological, curricular, and pedagogical advances over the recent short term (Bauwens, Hourcade, & Friend, 1989).

Lowenbraun, Madge, and Affleck (1990), for example, presented some data that illuminate the perspective of parents of both special and general education students under reformed service models. Their results indicate that both sets of the parents they studied were satisfied with general class placement of special education students and that their degree of satisfaction increased over time. The parents of the special education children were particularly positive concerning friendships and self-esteem factors associated with the general class placement sample. A substantial 87% of the mainstream sample parents indicated that they would choose general class placement again.

Bauwens et al. (1989) reviewed a number of teacher consultation models that are facilitative of the goals of special education reform. They described a particular approach, which they call cooperative teaching.

based on the collaborative consultation model of Idol, Paolucci-Whitcomb, and Nevin (1986). These models stress the use of teams made up of special and general education classroom teachers at the school site (a) to determine curricular and pedagogical approaches to be used with mainstreamed students identified for special education support and (b) to facilitate joint planning for utilization of professional resources at the school to best serve all of the students at the school.

Downing and Eichinger (1990) and Slavin, Stevens, and Madden (1988) presented impressive arguments for the extension of cooperative learning strategies to promote mainstream educational programs for students with dual sensory impairments and with "academically handicapped" students, respectively. It is clear from the emergent survey research literature on mainstreaming, however, that although general education principals and other administrators may be quite open to implementation of these kinds of reforms. little of the process will likely occur without efforts to deal specifically with the fear of loss of responsibility for special education students by special education teachers, and fear of lack of adequate classroom support felt by general education classroom teachers (Garvar-Pinhas & Pedhazur Schmelkin, 1989; Knapp & Turnbull, 1990; Vladero, 1990). Gersten and Woodward (1990) and Miller (1990) presented balanced arguments on the reform controversy and suggested that it should best be viewed as that portion of the school restructuring reform movement that is concerned with special education. Semmel and Gerber (1990), in reviewing the collection of papers by general educators that made up the special issue of Remedial and Special Education concerned with the REI (May/June 1990), provided a thoughtful focus on the perspective of classroom teachers in the reform process. In the context of expressing the usual caveat of special educators against the potential for cannibalizing P.L. 94-142 to find the money to solve the myriad larger problems of general education (Kauffman, 1989: Kauffman, Gerber, & Semmel, 1989), the authors in this publication have supported the reform efforts. This support, however, contains the caveat that at least some teacher collaboration models, which successfully focus efforts on all students in the general education classroom (including special education students), will need to be disseminated as highly visible demonstrations.

Semmel and Gerber (1990) also cited in detail Dolores Durkin's (1990) report of a classroom teacher who failed to benefit from consultation on special education children in her classroom because the general education teacher held "slavishly" to the idea that all of the children in her class should complete a given curriculum at the same minimal level of performance (i.e., mastery). Semmel and Gerber concluded that these kinds of educational reforms can be positive to the extent that

- Reform focuses on conditions that inhibit successful accommodations of particular children in general education classrooms.
- 2. An ethic of unified, school-based ownership of all children at the school, including ownership of the problems posed by all "difficult-to-teach" children, prevails at the school site.
- Special education must be focused at the school, not the district level, and a mechanism must exist for shared decision making and joint responsibility for all students at the site (Glatthorn, 1990a, 1990b).

The current wave of school reform in general education is clearly focused less on accelerating students who are already high achievers, and much more on improving the performance of more challenging populations associated with the changing demography of U.S. schools. This circumstance creates a significant window of opportunity for aligning the reform efforts in special education discussed above to those of general education. In the next section, reform efforts in general education are examined with an eye to potential correspondence with parallel efforts in special education reform.

### Reform in General Education

### The Problem of Students at Risk

The changing demography of America's school population, coupled with the increasing demands of technological advances in business and industry, have given rise to startling findings in recent analyses of the preparedness of America's schools to adapt to these changes. Among the findings of concern:

- 1 million students drop out of school each year
- 1.5 million teenage women become pregnant each year
- Between ½ and ½ of all U.S. children live below the poverty line
- On any given night it is estimated there are at least 100,000 homeless children
- Every year, more than 5,000 young people take their own lives
- More than 2.2 million cases of child abuse and neglect were reported in 1987
- Fifteen percent of graduates of urban high schools read at less than the 6th grade level
- Almost 10 million children have no regular source of medical care
- About 20 million children under 2ge 17 have never seen 2 dentist
- An estimated 3 million children have a serious drinking problem. (Davis & McCaul, 1990, p. 4)

If "students at risk" are defined as comprising only those who are likely to leave school prematurely or to graduate without the social, academic, and vocational skills needed to lead a productive life in our society, current estimates would place the figure at about 30% of current enrollment and growing yearly (New Partnerships, 1988). Research on the factors placing students at risk have focused in recent years on the concept of educational disadvantage (Hodginson, 1985; Levin, 1985; McDill, Natriello, & Pallas, 1986) and its implications for the way services are organized at the school site.

The primary indicators of societal factors that place children at risk have been identified as (a) poverty; (b) minority, racial/ethnic group identity; (c) non-English or limited English background; and (d) specific family configurations, such as single parent households (Davis & McCaul, 1990). These societal factors, which have been extensively documented in, for example. Rose (1989) and Schoor (1988), interact with school organization and environmental factors such as defective student-teacher and parent-teacher communication. low-motivational instructional materials, weak or ineffectual school leadership, and outdated instructional procedures to produce an unbroken cycle of deterioration in American education (MDC, Inc., 1988).

Whether one uses a general definition of at risk such as "unlikely to graduate" (Slavin, 1989) or a more detailed analysis, such as "educationally disadvantaged children" (Levin, 1989), it is clear that the problem is not simply concentrated in and closely associated with areas of inner-city urban decay. A National School Boards Association (1989) study indicated that as many as three-fifths of the at-risk population can be found in rural and suburban areas.

According to Lipsky and Gartner (1989), the present wave of reform in general education is characterized by a focus on higher standards of performance and professionalism at the state and local levels, and on effective schools research-based methods, such as cooperative learning and mechanisms for peer tutorial services (Bickel & Bickel, 1986; Gartner & Lipsky. 1990a; Jenkins & Jenkins, 1981), to address primarily the problems presented by the population of students at risk. The hallmark of this reform is community empowerment in the life of the schools (Carnegie Foundation for the Advancement of Teaching, 1988: Committee for Economic Development, 1987). Current school restructuring efforts, for example, are concerned with greater parent involvement in the decision-making apparatus of the schools, and greater community participation in school management, such as is evidenced by the local school governing board experiment currently under way in Chicago. Finally, greater flexibility in the integration of resources available to the school site through federal categorical programs is being strongly advanced (Gartner & Lipsky, 1987; Lipsky & Gartner, 1989).

One of the principal recommendations of the report by the National Center on Education and the Economy (NCEE), To Secure Our Future: The Federal Role in Education (1989), is to restructure schools for high performance. The report stresses incorporation of curriculum and instruction to promote mastery of higher order thinking skills in all students; requiring performatice-oriented outcomes for school achievement; upgrading teacher skills and standards; and giving teachers more authority in school decision making. Most important, the NCEE report calls for a comprehensive restructuring of the way categorical programs, such as Special Education, Chapter I, Vocational Education, Adult Education, Bilingual Education. Head Start, and other programs, are operated. Removal of children from opportunities to succeed or even excel in the mainstream, according to the report, is costly and detrimental to all, particularly since the relatively rich resources provided through categorical programs to benefit children who are often inappropriately labeled neither demonstrably improves their educational outcomes in isolation (Lipsky & Gartner. 1989), nor allows for the maximization of educational resources for the good of all.

The categorical restructuring of the type recommended by NCEE can be accomplished within the framework of existing rules, regulations, and waiver processes to permit experiments in school restructuring to be properly evaluated and useful models to be disseminated without throwing various categorical "babies" out with the proverbial bathwater (Vergason & Anderegg, in press). The rules and regulations governing the Individuals with Disabilities Act (IDEA), for example, are specifically designed to protect the rights of children with disabilities and prevent their resources from being redirected to meet the needs of "more capable, but underachieving" populations. Compromising those protections is dangerous, unwise, and unwarranted, particularly if it can be demonstrated that IDEA resources can be harnessed and coordinated in such a manner, at the school site, to actually improve outcomes for students with disabilities while, at the same time, having a positive impact on the total school population through an integrated programmatic structure (California State Department of Education, 1989).

In addition to innovation in assessment, curriculum, and instructional practices, most school restructuring models that have been described in the literature to date have at least three of the following four primary sets of operations in common:

- 1. School organizational autonomy
- 2. Site-based management and shared decision making
- 3. Full infusion and coordination of categorical resources
- 4. Community participation in the life of the school

### School Organizational Autonomy

Elmore and Associates (1990) have argued that school restructuring must concern itself with curriculum and teaching technology issues, but only within the context of school organization, school governance. and the place of the governance structures within the state systems. Cohen (1988) similarly argues that restructuring must be viewed as organizationally multitiered and, most important, must be related in clear. measurable ways to improved school productivity and student performance. States must stimulate restructuring through evolving functional standards of accountability, highly publicized results of accountability data, and by providing rewards and sanctions linked to school/student performance. Concomitant changes at the school, district, and state levels will be required to accomplish restructuring.

David, together with her colleagues (David, 1990; David, Cohen, Honetschlage, & Traiman, 1990), recently provided a set of recommendations to the nation's governors entitled State Actions to Restructure Schools: First Steps, a publication of the Center for Policy Research of the National Governors' Association (David et al., 1990). David et al. approach restructuring from a policy analysis perspective, and target specific actions that can be initiated at the level of the state education agency to stimulate action at the district level. Their blueprint for state action includes the following steps:

- 1. Define restructuring at the state level and create a vision for its outcomes.
- 2. Initiate conferences, statewide and regional, to inform the educational community and the public about the initiative.
- 3. Build statewide support for the initiative through networking organizations.
- 4. Start small with invited or competed pilot demonstration projects.
- 5. Offer access to waivers from state rules to facilitate demonstration projects (see Table 1 for examples of waiver requests).
- 6. Provide time for staff development and staff meetings to get restructuring off the ground.
- 7. Offer technical assistance and training from state and brokered services.
- 8. Gradually shift the state role from compliance policeman to facilitator and assistance provider.
- 9. Provide an outcomes-driven philosophy that stresses school accountability and increases student performance.
- Maintain a clear focus on the specific goals and objectives of a state-level restructuring initiative.

What is clear from the writings of David, and also Skrtic (1988; 1990), is that restructuring is a viable concept and worth retaining as a clearly focused set of

Remedial and Special Education

- . Use textbook money for books and materials not on the approved list
- . Combine three high school classes into a three-hour block
- Allow teachers professional leave time during the school year
- · Allow an elementary certified teacher to teach with a ninthorade team
- Allow secondary teachers to teach subjects other than their certified subject in order to participate on a multidisciplinary team :....
- . Shorten the high school day to allow time for forty-minute special topic seminars for small mixed grade groups taught by teachers, administrators, and clerical staff
- . In order to provide additional time for teachers to meet and plant.
  - Reduce student contact hours;
- Hire a full-time substitute; and - Set aside full days without students for teachers
- · Ignore state curriculum guidelines in order to implement a cross-disciplinary curriculum
- . Ignore class size limits to allow large classes for certain presentations freeing teachers to have small discussion groups at a second
- · Remove grade-level restrictions on the use of paraprofessionals to enable schools to use them as needed
- . Ignore requirements for specified minutes of instruction by subject area to allow more flexibility in how time is spent
- Redefine high school credits to permit credits for cross-disciplinary courses

Note. From State Actions to Restructure Schools: First Steps (p. 21) by J. David, M. Cohen, D. Honetschlager, and S. Traiman, 1990, Washington, DC: National Governor's Association, Center for Policy Research. Reprinted by permission.

goals, objectives, and specifiable outcomes; restructuring cannot be accomplished from either the "top down" by a policy analytic/administrative set of interventions, nor can it effectively proceed from the "ground up" by simply restructuring what goes on within individual schools in isolation. Effective restructuring is organizationally systemic in nature and must proceed from both directions simultaneously. The set of operations required for school organizational autonomy require multilevel policy analyses and clear specifications as to the extent of autonomy and flexibility afforded to the school site.

### Site-Based Management and Shared Decision Making

Virtually all of the broad strategies that have emerged in the recent literature of school restructuring have stressed the component of decentralized governance (Sirotnik & Clark, 1988). In these systems, the locus of decision making with regard to the day-to-day operation of school programs is largely shifted from the central district office to the school site administrators, with the result being much more flexibility and

autonomy among the schools, both in organization? governance and in program implementation.

Site-based management models allow decisions to be made about how various categorical revenues are to be coordinated and utilized, how instruction is to be organized and delivered, how curriculum and materials are to be selected and staffing arrangements to be made—all concentrated at the level of the building principal (Cohen, 1988). Site-based management can. of course, vary substantially on dimensions of school organization, such as the extent to which the management style is "bureaucratic or adhocratic" (Skrtic, 1988).

Shared decision making is one current focus of sitebased management efforts at restructuring. Under this model, teachers, other school staff, administrators, and parents form a group that is charged with the responsibility of making key school decisions in allocating resources. Issues such as how students and staff are assigned to classrooms; how roles of administrators are to be determined; how personnel are evaluated, hired, fired, or promoted; curriculum issues: all can come under the purview of a shared-responsibility, sitemanagement group.

The issue of teacher authority in decision-making models at the school site is a second factor in site-based management models that may directly affect teacher motivation and job performance (e.g., Cistone, Fernandez, & Tornillo, 1989). It is axiomatic that "fired-up" teachers produce results that are reflected in a wide range of pupil-focused outcomes. Teacher motivation has long been a critical, neglected, and puzzling variable in the school reform literature, but is clearly linked to teacher perception of professional authority in all aspects of the life of the school (The Holmes Group. 1986; McDonnell & Pascal, 1988). The most creative ideas for educational reform at the school site level will have only a fraction of their potential impact under a top-down, administrative-mandate structure, in which teachers are given in-service training in new technologies and configurations and then expected to implement reforms with no particular say in the decisions that led to the mandate. The room for creative restructuring at the level of the school site is clearly at the point of design of organizational schemes that secure teacher buy-in concerning all aspects of educational reform and resource allocation to implement those reforms (Skrtic, 1988).

Conley (1988) found four critical domains that must be influenced directly by teachers in a shared-decision model: (a) organizational resource allocation; (b) work allocation (e.g., school assignments); (c) professionalorganizational interface (i.e., grading policies, staff hiring); and (d) teaching process (curriculum, textbooks. etc.). Greater teacher authority in these realins implies different organizational studies to support the process. Similarly, Lieberman (1988) pointed to the need to pay careful attention to sociological aspects of organiza-

tion theory in moving toward shared-decision models that emphasize greater teacher authority and professionalism, because some arrangements are likely to operate more effectively than others.

Perhaps the most comprehensive resource to emerge to date on all of the myriad issues that face conversion to shared-decision models is that provided by Marburger (1985). The issue of "management councils" is discussed in detail, with particular concern given to membership; size issues; selection or election processes for membership; processes for selection of membership from the community; relationship of the management council to the district office, school board, and community agencies; the role of the principal; and the conflict-resolution issues surrounding the school accountability criteria with respect to the position of the principal and his or her relationship to the management council, council products and procedures, and issues concerned with budgeting and allocation of time for participation on the council (Sailor et al., in press-a. in press-b; Sykes, 1990).

### Full Infusion and Coordination of All Available Resources

The third set of operations characterizing some school restructuring models pertains to the issue of resource reconfiguration and management. The best teachers working with the most advanced curriculum and with effective teaching practices still cannot hope to reverse the processes that place students at risk for school failure and dropout without adequate resources, particularly when class sizes are high. The needs of children at risk are many, and human resources in general education are typically too few. Many of those human resources needed for the educational improvement of all children are locked up in federal categorical programs that are designed to benefit relatively few students, and often historically in isolation. The major policy issue at stake here is whether those students for whom categorical resources are tagged can have their specialized needs met in a manner that allows all students at the school to benefit from those programs (Sapon-Shevin, 1988: Shaw et al., 1990).

An examination of special education resource allocation, as one categorical program, provides a case in point. In fiscal year 1987, 4.4 million students were served in special education in the U.S. at an annual cost for that year of \$1.338 billion (Lipsky & Gartner. 1989). The process of referral and placement of these students varies so widely and haphazardly around the country, according to one report, that at times it seems to approximate pure chance (Ysseldyke, 1983). The Council of Great City Schools in 1986, for example, reported that referral rates for special education programs in the nation's large cities varied between 7.8%

and 91.8% (Council of Great City Schools, 1986) The problem of identifying who is truly in need of special education resources is significant, and raises serious questions as to whether expensive resources are being largely mismanaged or misapplied. For example, as a category, learning disabilities (LD) increased 1+2% between 19<sup>---</sup> and 198<sup>--</sup>, whereas special education as a whole increased only 20% in the same period LD now describes around ++% of all students identified nationally for special education services.

- More than 80% of the student population could be classified as learning disabled by one or more definitions presently in use (Ysseldyke, 198")
- Based upon the records of those already certified as learning disabled and those not, experienced evaluators could not tell the difference (Davis & Shepard, 1983)
- Students identified as learning disabled cannot be shown to differ from other low achievers on a wide variety of school-related characteristics (Algozzine & Ysseldyke, 1983; Bartoli & Botel, 1988; Ysseldyke, Algozzine, Shinn, & Mcgue, 1982). (U.S. Department of Education, 1989, p. 9)

A further complication in the referral and placement of students for special education services is to be found in the continuing overrepresentation of students of various racial and ethnic groups. In the 1986–1987 school year, minority populations represented 30% of all U.S. public school students, but made up 42% of special education students labeled as educable mentally retarded (EMR). This proportion was particularly overbalanced for students of African-American descent, who made up 16% of the public school population but 35% of the EMR subpopulation within special education, according to a 1988 national survey (Hume, 1988d, 1988e).

The question of misidentification of pupils for specialized resources might not present such a monumental concern for school restructuring if these students' educational needs were being met in the mainstream. but such is not the case. In the 1985–1986 school year. barely one-fourth of all students served in special education nationally received those services in general education classrooms and other general instructional environments (Hume, 1988a, 1988b, 1988c). For most special education students, their program is a separate pull-out or send-off effort for most of the school day. If special education students and their relatively rich mix of resources are pulled out of mainstream education, the relevant question of interest becomes, do they so benefit from this educational apartheid? Lipsky and Gartner (1989) in a review of the literature on special education efficacy concluded:

Reviews and meta-analyses . . . consistently report little or no benefit for students of all levels of

Remedial and Special Education

severity placed in special education settings (Carlberg & Kavale, 1980; Cegelka & Tyler, 1970; Epps & Tindal, 1987; Glass, 1983; Kavale & Glass, 1982; Leinhardt & Pallay, 1982; Madden & Slavin, 1982, 1983; Semmel, Gottlieb, & Robinson, 1979; Ysseldyke, 1987). Even the authors of a petulant attack on challenges to present special education practices offer little to defend them (Kauffman, Lloyd, & McKinney, 1988). (Lipsky & Gartner, 1989, p. 19)

If special education in separate pull-out programs is a relative failure (Lipsky & Gartner, 1989), and, conversely, the success rate is demonstrably higher in general education program applications (Hagerty & Abramson, 1987; Slavin & Madden, 1989), then the question arises as to whether coordinating special education resources within the general education program might indeed benefit all students. Slavin (1990), for example, showed that special education students profited significantly in a range of educational outcomes from inclusion in cooperative learning groups at the elementary school level when compared with similar students in a special class situation, and without any loss to the general education students in the group. In a report that generated much controversy, Wang (1988) found similar results in a comprehensive series of studies of the Adaptive Learning Environments Model (ALEM), a general education-based delivery system.

Resource infusion as a set of restructuring operations thus reflects the existing knowledge base concerning the comparative efficacy of keeping federal categorical programs within their diverse resources, such as represented by special education, closely coordinated with and infused into the general education program so that benefits might accrue to both general education and categorically identified students. As yet, however, there is no data base with which to refute or support the attribution of benefits for general education students resulting from a full infusion of special education resources. Finally, thre is an obvious need to protect the statutory and regulatory requirements, including due process mechanisms in P.L. 94-142 and P.L. 99-457, within the specified operations of resource infusion. School restructuring efforts are a failure if there are no demonstrable improvements in the educational programs and performances of special education students, as well as the general student population at the school. Some states (e.g., California) have passed laws designed to facilitate these kinds of school restructuring efforts in a manner that protects the specific federal requirements for each program category.

## Community Participation in the Life of the School

The fourth component of typical school restructuring models involves the extent to which the school can successfully regain its all-but-lost status as a fundamental mainstay of the community it serves (Sailor. 1990). This component has a particular reletance for the potential of its impact on children at risk for school failure and dropout. The work of Clark (1983, 1989) presents an example of community participation inrestructuring. Clark developed strategies to involve the families, single parents, and foster care providers of African-American children in predominantly poor, multiethnic, minority school districts in their children's academic life in the school. His efforts, particularly in math and reading through parent involvement in homework, paid off in greatly improved test performances of his subjects and reduced status for being at risk. Clark (1989) was able to show that illiterate parents can nevertheless stimulate a child's reading and writing skills by, for example, focusing the child's attention on stories invented by the parents to nonword picture story books.

Many community involvement strategies are focused on the problem of high school dropout. Among the factors most closely associated with high school dropout has been the perception of school as a relatively valueless place in the eyes of families of children at risk in earlier grade levels (Council of Chief State School Officers, 1989). If school is a place where children of poverty are viewed negatively by teachers and administrators, and where parents are held accountable for these perceived problems by being furnished with detention slips, requests to come in for disciplinary discussions, threats of suspension, and so on. then parents will come to view the school as mainly a place of bad news and harassment. Such a view is soon communicated to the child, and the school comes to have a negative value.

Community involvement is required, as a key component of restructuring, in such diverse areas as improved health care for young children, provision of preschool and infant support services, case management and child protective services (Hickey, Lockwood. Payzant, & Wenrich, 1990), parent involvement in school decision-making councils, community volunteer participation in middle and junior high schools (Vasquez, 1990a, 1990b), and the involvement of business and industry in the process of transition from school to adult status at the secondary school level (Sailor et al., 1989). This list taps but a few of the significant ways that members of the community can enhance the life of a school under restructuring and identification of services to meet children's specific health care needs (Hickey et al., 1990).

A number of federal programs are now under way that significantly augment the community involvement effort through the restructured school. For example, the Comprehensive Child Development Program will supply \$19,760,000 per year through fiscal year 1993 for the funding of 10 to 25 projects for intensive, comprehensive, integrated, and continuous support ser-

vices for low-income infants, toddlers, preschoolers. parents, and other household members. Under the Medicaid expansion program, pregnant women and young children uncer the age of I year who have poverty-level income will be eligible for Medicaid. P.L. 99-45", which extends Individuals with Disabilities Act (IDEA) entitlements to early childhood at-risk (for disability) children, and the Family Support Law of 1989 greatly augment services potentially harnessed through the schools to young children. The latter requires the states to provide more systematic support to recipients of Aid to Families with Dependent Children (AFDC) and to establish a Basic Skills (JOBS) program. Under this law, states are required to evaluate the level of child care necessary to permit parents to engage in education, training activities, or work.

The critical need to expand and coordinate children's services through the schools is highlighted by the extent to which many children eligible for entitlement programs are not presently recipients of these programs (Kagan, 1989; Leichter, 1979; Lightfoot, 1987; McLaughlin & Shields, 1987; Seeley, 1981). Sixty percent of families headed by single mothers with children under 6 are living in poverty. These children are three times more likely to die in infancy than are other children; four times more likely to become pregnant as teenagers; far more likely to suffer serious illness, abuse, neglect, and to drop out of school than are their economically sufficient counterparts. Yet, in California research shows that less than half of all eligible children in that state receive AFDC income (Wald, Evans, & Ventresca, 1989).

## Community Involvement in Secondary Education

Community involvement at the high school level is often heavily focused on the foundation of new partnerships between business/industry and the schools to facilitate the transition of students into adult status. Central to high school restructuring around transitional services is the regrouping of traditional vocational educational programs (Kadamus & Daggett, 1986). Examples of restructuring in high schools in Boston (Dentzer & Wheelock, 1990) and in New York (Kadamus & Daggett, 1986) have indicated how vocational education resources can be effectively reorganized to facilitate the movement of students into the workplace or into higher education through partnership arrangements between high schools and business/industry councils, or between high schools and higher education agencies.

Integrated learning environments, for example, can provide a vehicle for blending community and school resources into a common planning framework that has a significant, measurable impact on the reduction of high school dropout (Fillmore, in press; Flynn, 1989).

Collaboration between high schools and such agencies as the Department of Vocational Rehabilitation (DVR) and Department of Developmental Services (DDS) or their equivalents, together with business and industry groups, has led to recent strong movements in vocational education to create direct community job experiences within career employment opportunities for high school students (Siegel, 1988; Siegel & Gaylord-Ross, 1991), and the creation of transition specialists within high schools whose jobs call for the development of career-linkage plans for categorical students and students at risk for dropout (Sailor et al., 1989).

### Comprehensive Local School (CLS)

The California Research Institute (CRI) at San Francisco State University began the development of an approach to school restructuring in 1985, which was widely disseminated in 1989 with the publication of the text. The Comprehensive Local School: Regular Education for All Students with Disabilities (Sailor et al., 1989). This model, which began with efforts to socially integrate students with severe disabilities into the life of regular schools, has expanded over the past 3 years to a model of school restructuring that is strongly geared to coordinated management of categorical resources to the collective advantage of all students at the school site; hence, the term comprehensive local school.

The CLS approach has five distinct components. each of which is geared to a specific age group in the educational continuum. School organization and restructuring is thus examined in terms of issues affecting (a) early childhood programs, (b) elementary programs, (c) middle school or junior high school programs, (d) secondary programs, and (e) postsecondary educational programs.

Comprehensive Local School as an approach to school restructuring has two principal features that distinguish it from many other models. First, CLS envisions the school as the coordinating vehicle for all children's services, going beyond traditional educational issues to encompass health and social service issues as well (Kirst & McLaughlin, 1990; Morrill & Gerry. 1990). Schools under this model gradually progress toward becoming comprehensive, interdisciplinary children's service centers, with education making up the primary service around which other services. including case management and health-related services, are configured according to need (Hickey et al., 1990). Second, CLS functions as a comprehensive. unified educational vehicle with all categorical programs reconfigured and coordinated at the school site under a strong site-based management system characterized by a shared decision-making process.

### Conclusions

Those special educators associated with, or indeed committed to the current directions in reform, such as those indicated by the LRE mandate for social and academic integration and the retention of special education students in general education classrooms, might well consider forming a strong alliance with the school restructuring process under way in the dominant reform movement within general education. With an increasing likelihood of further progress in special education reform being closely linked with (if not co-opted by) processes of change in the bigger picture of general school organizational reform, an opportunity exists to realign all educational systems to work more effectively and efficiently for all children at the school site. The inherent danger to special educators who choose to maintain the status quo and to wait this one out is to ultimately witness the possibility of a takeover of special education programs and funding by an increasingly troubled and strained general education system that is ill-equipped to utilize effectively special education and other federal categorical resources to benefit the increasingly diverse population it is intended to serve.

In terms of federal policy, special education, as a field, is at a crossroads. The pressing reform movement in general education can result in an expanded use of special education as a separate system (Lipsky & Gartner, 1989). An expansion in eligibility of the number of types of categorically defined students with special needs, for example, offers one possibility. The present debate over whether Attention Deficit Disorder (ADD) should be included is a case in point. Expansion in special education eligibility could lead to a condition under which as many as 25% to 30% of public school enrollment is served by a separate special education delivery system.

Alternatively, reform efforts within special education to achieve greater levels of integration within general education offer the more attractive possibility for a shared educational agenda for all students. By a more judicious and efficient application of special education and other federal, categorical program resources at the local school site level, these resources might well be reconfigured under school restructuring efforts to better meet the needs of all students at the school.

Wayne Sailor, PbD, directs the California Research Institute at San Francisco State University (SFSU), a 5-year research and technical assistance institute concerned with the integration of students with severe disabilities into general education classrooms and schools. He is also site director of the SFSU Research and Training Center for Community-Referenced Behavior Management Technologies for Students with Severe Disabilities Dr. Sailor is a professor of teacher education at SFSU and is also co-coordinator of the Joint Doctoral Program in Special Education with the University of California at Berkeley. A member of the editorial board of The Journal of The Association for Persons with Severe Handicaps. Dr. Sailor is also senior author of the book The Comprehensive Local School (published by Paul H. Brookes. 1989), which is concerned with issues and models of general school service delivery for all students with disabilities. Address: Wayne Sailor. San Francisco State University, 612 Font Blvd., San Francisco, CA 94132.

## SECTION THREE

National List of Schools Engaged in Restructuring

### **ALASKA**

Robert Gottstein WISE Project 310 K St. Anchorage AK

99501

John Carey Principal

Flippin High School

P.O. Box 239 Flippin AR

72634

Mary Stenseth 1671 Park Ave. San Jose CA

95126

### **ALABAMA**

Carolynn Akers
Junior League of Mobile
57 North Sea Ave.
Mobile AL
36607

Mona Briggs Principal

Woodland Junior High School Woodland and Poplar Streets

Fayetteville AR

72701

Peter Mehas

1111 Van Ness Ave.

Fresno CA 93721

### **ARKANSAS**

72126

James Floyd
Principal
Perryville High School
P.O. Box 129
Perryville AR

Cecilia Johnson Learning Coordinator Arkansas Dept. of Education

4 Capitol Mall Little Rock AR 72201 Ilene Straus Principal Lincoln Middle School

1501 California Avenue Santa Monica CA

90403

### CALIFORNIA

Charles Tadlock
Principal
Sheridan Junior High School
500 North Rock Street
Sheridan AR
72150

Principal
Soquel High School
401 Old San Jose Rd.
Soquel CA
95073

Philip Bliss Chairman Mid-Peninsula High School 870 North California Avenue Palo Alto CA 94303

Harry Wilson Principal Springdale Junior High School Springdale AR 72764

Principal
Washington High School
801 Howard Ave.
Burlingame CA
94010

Robert Stein
Principal
O'Farrell Community School
6130 Skyline Drive
San Diego CA
92114

Travis Case Principal Bald Knob Junior High School Route 3, P.O. Box 33 Bald Knob AR 72010 Principal Amos Alonzo Stagg High School 621 Brookside Rd. Stockton CA 95207 Lois Jones Principal Oceana High School 401 Paloma Avenue Pacifica CA 91107

Roger L. King
Coordinator
Rancho San Joaquin Middle School
4861 Michelson Road
Irvine CA
92715

David Pope Principal Spring View Middle School 5040 5th Street Rocklin CA 95677

David Marsh Regional Coordinator University of Southern California W.P.H. 702 Los Angeles CA 90089-0031

Dennis Gray Regional Coordinator 1056 Nautilus Street LaJolla CA 92037

Steve Jubb Regional Coordinator 4189 Montgomery Street Oakland CA 94611

Tena Peterson
Principal
Longfellow Elementary School
3610 Eucalyptus
Riverside CA
92507

Judy Cunningham Principal Rancho San Joaquin Middle School 4861 Michaelson Rd. Irvine CA 92715

Robert Stein Principal O'Farrell Community School 6130 Skyline Dr. San Diego CA 92114

Judy Codding Principal Pasadena High School 2925 E. Sierra Madre Blvd. Pasadena CA 91107

Chloe Kamprath Principal Mid-Peninsula High School 870 N. California Ave. Palo Alto CA 94303

Lois Jones Principal Oceana High School 401 Paloma Ave. Pacifica CA 94044

David Pope Principal Spring View Middle School 5040 5th St. Rocklin CA 95677 Mary Lou Mendoza Principal James Lick Middle School 1220 Noe St. San Francisco CA 94114

James Storer Principal De Anza High School 5000 Valley View Rd. Richmond CA 94025

Pam Watson Acting Principal Fremont High School 4610 Foothill Blvd. Oakland CA 94601

Mike Bowers
Principal
Arroyo High School
15701 Lorenzo Ave.
San Lorenzo CA
94580

Christopher Franklin Principal Central Jr. High School 1201 Stoneham Ave. Pittsburg CA 94565

Jeff Reich Principal Antioch High School 700 West Eighteenth St. Antioch CA 94509

Joe Sewell Principal Piner High School 1700 Fulton Rd. Santa Rosa CA

95403

Gerry Baker Principal Woodside High School 199 Churchill Ave. Woodside CA 94062

Rob Gaskill Principal Irvington High School 41800 Blacow Fremont CA 94536

Marilyn Loushin-Miller Principal Crocker Middle School 2600 Ralston Dr. Hillsborough CA 94010

Suga Moriwaki Assistant Principal California High School 9870 Broadmoor Dr. San Ramon CA 94583

Walter Quinn Principal Foothill Middle School 2755 Cedro Walnut Creek CA 94598 Nardy Samuels Principal Santa Monica High School 601 Pico Blvd. Santa Monica CA 90405

Tim Scully Assistant Principal North High School 3620 W. 182nd St. Torrance CA 90504

Bill Herrera San Ramon Valley U.S.D. 9870 Broadmoor Dr. San Ramon CA 94583

John DiPaola Fremont Unified School District 41800 Blacow Rd. Fremont CA 94538
